teknion expansion cityline

Inspired by the dynamic layers of the urban landscape and the serene elevated flow of New York's High Line, Expansion Cityline reimagines the office as a vibrant, interconnected neighborhood. Acting as a foundational spine, the framework scales fluidly from low-profile Desk Structures and Low Fences that preserve open sightlines and foster collaboration, to High Fences and A-Frames that introduce vertical layers and calibrated levels of visual and acoustic privacy.

By seamlessly housing high-capacity power, data, and cable infrastructure beneath the worksurface, the system opens up the vertical space above for expressive personalization, pairing privacy screens, suspended organizers, and integrated biophilia to bridge structural precision with human-centric warmth.

ARCHITECTURAL FRAMEWORK

Expansion Cityline is built on a scalable kit-of-parts. From low fences that preserve an open visual horizon, to high fences and A-frames that introduce vertical layers and acoustic privacy, the structural spine adapts intuitively to the needs of any neighborhood.

Serving as the technical foundation for the entire system, the six core typologies scale from low-profile frames to elevated architectural boundaries. Anchored by a continuous beam for integrated power and cable routing, the platform seamlessly accepts modular tiles—including acoustic felt, glass, cork, vertical poles with accessories, and biophilic planters—giving users complete freedom to calibrate visual sightlines, acoustic performance, and functional storage across any workplace layout.
