

Finishes and Enhancements

At Luum, we're committed to providing solutions that support both the functionality and sustainability of your spaces. Our finishes and enhancements are thoughtfully designed to meet the evolving needs of modern environments.

We understand that every space has unique needs. Our range of finishes and enhancements is designed to support the longevity, safety and beauty of our textiles without compromising on sustainability or well-being.

Whether you're looking to simplify cleaning, enhance durability or meet specific performance standards, our treatments are here to help your textiles work harder and last longer.

Please note:

- Not all treatments are available for each style. Approved treatments for a particular style are noted in the drop down box when yardage is selected. "Coated" fabrics, such as Polyurethanes, Vinyls, Silicones and ThermoPlastic Elastomer's (TPE) cannot have aftermarket treatments applied to them. (Coated fabrics, by their nature, are normally stain resistant and moisture resistant.)
- Overages of up to 10%-20% may occur on orders with special finishes.
- Please contact Customer Service at 1-877-705-LUUM (1-877-705-5886) or your Luum representative for details.

Stain Resistance

Life happens. Our stain-resistant finishes help fabrics repel water and oil-based spills, making cleanup easier and extending the life of your textiles.

- **Standard:** Topical finish that repels water-based and oil-based soil and stains to allow for easier cleaning by inhibiting stain and soil penetration.

Backing Options

Enhance the structural integrity of your textiles with our backing solutions, designed to improve stability and minimize seam slippage.

- **Acrylic:** An acrylic backing that improves dimensional stability and minimizes seam slippage. Different thicknesses of backing can be applied based on performance requirements. Available in Light and Heavy backing.

Moisture Resistance and Liquid Barrier

For spaces where spills are a concern, we recommend Alta™ Food and Beverage or Alta™ Healthcare treatments.

- The moisture barrier backing is combined with Alta™ Stain Repellent to give added protection against liquid spills. Some fabric types may not be compatible, please inquire.

Flame Resistance

Safety is paramount. We offer flame-resistant treatments that meet specific code requirements without the use of harmful halogenated or brominated chemicals.

- **Flame Resistant Options:** Available in both immersion and backcoating applications, tailored to your project's needs.

Antimicrobial Treatments

In environments where hygiene is critical, our antimicrobial finishes help inhibit the growth of odor-causing bacteria, mold, and mildew.

- Optional addition to Alta™ Healthcare treatment: an antimicrobial treatment that controls microorganisms that cause odors, stains, mold, mildew and fungus. BioAM™ controls microorganisms through an electronic charge that can be added to the Alta™ Healthcare treatment. Some fabric types may not be compatible, please inquire.

Please note: While these treatments inhibit microbial growth, they are not effective against viruses.
