# balance chair by modus

## product details

### product description

Designed by Jonathan Prestwich, the Balance Chair brings together task chair functionality and the comfort of an armchair. It responds to the needs of today's blended workspaces with a soft, welcoming aesthetic and ergonomic performance built for long periods of focused use. At its core is a self-adjusting tilt mechanism that adapts naturally to the user's movement, supporting both concentration and dynamic collaboration in shared environments.

Balance fits seamlessly into private offices, meeting spaces, and hybrid work zones where comfort, clarity, and adaptability are essential. Available with or without arm pads, the chair comes in a selection of base options, including a 5-star model with castors, height adjustment, and a lockable tilt mechanism for ergonomic support. The removable cover is glue-free, reducing waste and allowing the chair to be refurbished easily across multiple lifecycles. Upholstered in Modus' Somerset factory using 100% renewable energy, Balance pairs sustainable production with a wide selection of upholstery and base finishes to suit a variety of interiors.

### collection

### fabrics & finishes

#### Upholstery

Available in LUUM fabrics; COM/COL; and selected Modus fabrics.

#### Leg Finishes

Powdercoat paint, Polished Aluminium
