

LUUM

Care for Top Coat Silicone Upholstery

Top Coat is a performance faux leather made from 100% silicone, which inherently rejects microbiological growth, making it widely applicable in corporate, education, healthcare and hospitality settings. PVC-free silicone supports indoor air quality, while its performance capabilities are expansive: inherently ink and denim resistant, anti-microbial, anti-fungal and bleach and viricide cleanable.

While Top Coat has been tested with many cleaners, Luum recommends a human health friendly, straight forward approach to daily maintenance of upholstered pieces in high traffic areas. Gentle maintenance methods, such as soap and water cleaning or isopropyl alcohol solution will address most soiling concerns. Silicone materials, like Top Coat, are naturally stain repellent and, by their nature, inherently reject microbiological growth.

Daily Care and Maintenance

- Regular, light dusting with a microfiber cloth.
- Vacuum regularly with a clean, soft brush upholstery attachment.
- Clean stains and spots promptly using the gentlest methods first.

Recommended Method for Daily Cleaning

Soap and water cleaning is gentle and effective at removing most soiling concerns.

- Add a few drops of dish washing liquid, such as Dawn, to a gallon of warm water. Using a soft, clean cloth wipe over the top coat upholstery. Follow up with a clean water wipe and clean cloth to remove any residue.

Denim, Ink and Other Stains

Top Coat silicone upholstery is inherently ink and denim resistant.

Stubborn denim dye and ink stains can be gently cleaned using an isopropyl alcohol (commonly known as rubbing alcohol) and water solution or wipe.

Use products containing isopropyl alcohol and water ONLY- no other ingredients.

A 70/30% mixture of isopropyl alcohol to water will work for most stains. For very stubborn ink, such as a Sharpie or marker, Luum recommends use a higher concentrate of isopropyl alcohol (over 90%). Isopropyl alcohol is available in solutions, sprays or wipes (GlobalTech® Isopropyl Alcohol is a brand name). Products are available in a 70/30% solution or a 90%+ solution.

Cleaning Code Information

The cleaning code for Top Coat is WS meaning that it can be cleaned with water-based or either solvent based cleaning agent. Luum recommends water based cleaning solution first, as these are the gentlest yet effective cleaners.

Solvent based cleaners are not meant for daily use. They are for specific instances when a water based cleaner has not worked. After each application, the surface must be wiped with clean water and dried with a clean towel to remove any chemical residue.

Care for Top Coat Silicone Upholstery

Other Products

Top Coat has been tested using the following cleaners with the results per product listed below:

- Always test the cleaning agent in an inconspicuous area.
- Do not use hard-surface cleaners on fabrics; follow product instructions.
- DO NOT over saturate with liquid.

After each application, the surface must be wiped with clean water and dried with a clean towel to remove any chemical residue.

Improper use of cleaners/disinfectants can expedite a product failure and void warranty.
