product details

product description

Teknion and design firm PearsonLloyd have sustained a creative partnership and collaboration that takes new form in Banqs™, a seating collection shaped by the concept of multi-purpose settings that suit a mix of activities, from focused work to informal meetings and social gatherings. Banqs is a modular system comprising sofas, screens, tables and accessories that can be reconfigured to support a variety of workstyles. With varying screen heights for privacy, Banqs adapts to different work environments while encouraging openness.

Designed for corporate, educational and public spaces, Banqs supports a range of work modes, from open-plan offices to lounges and cafés. Banqs offers a variety of table options, including integrated worksurfaces, freestanding tables and occasional pieces to support day-to-day activities. Power access is available through under-seat modules, tabletop ports and concealed cable routing. In booth configurations, A/V integration options further enhance connectivity for presentations, video calls or focused collaboration.
